</table>
Evaluating Functions

Example 1: Evaluate each function.

a) Find $y$ when $x = 2$ given $y = 8 + 3x$.
   
   $y = 8 + 3(2)$
   
   $y = 14$

b) Find $y$ when $x = \frac{2}{3}$ given $y = -6x$.
   
   $y = -6 \left( \frac{2}{3} \right)$
   
   $y = -4$

c) Find $y$ when $x = -4$ given $y = 2x^2$.
   
   $y = 2(-4)^2$
   
   $y = 32$

d) Find $y$ when $x = \frac{1}{4}$ given $y = \sqrt{x} + 1$.
   
   $y = \sqrt{\frac{1}{4}} + 1$
   
   $y = \frac{3}{2}$

Try: Evaluate each function.

a) Find $y$ when $x = -3$ given $y = -x + 4$.

b) Find $y$ when $x = \frac{5}{4}$ given $y = 8x - 2$.

   
   
   
   
   c) Find $y$ when $x = -2$ given $y = -x^2 - 9$.

   d) Find $y$ when $x = 27$ given $y = \sqrt[3]{x} - 3$
Function Notation – denoted by \( f(x) \), \( g(x) \), or \( h(x) \).

treated the same way as \( y \)

Example 2: Evaluate given \( f(x) = -3x + 5 \) and \( g(x) = x^3 \).

a) Find \( f(l) \).
\[
\begin{align*}
  f(l) &= -3l + 5 \\
  f'(l) &= 2 \\
\end{align*}
\]

b) Find \( f\left(\frac{1}{3}\right) \).
\[
\begin{align*}
  f\left(\frac{1}{3}\right) &= -3\left(\frac{1}{3}\right) + 5 \\
  f\left(\frac{1}{3}\right) &= 6 \\
\end{align*}
\]

c) Find \( g(-2) \).
\[
\begin{align*}
  g(-2) &= (-2)^3 \\
  g(-2) &= -8 \\
\end{align*}
\]

d) Find \( g\left(\frac{3}{4}\right) \).
\[
\begin{align*}
  g\left(\frac{3}{4}\right) &= \left(\frac{3}{4}\right)^3 \\
  g\left(\frac{3}{4}\right) &= \frac{27}{64} \\
\end{align*}
\]

Try: Evaluate given \( f(x) = -\frac{3}{2}x \) and \( g(x) = x^2 - 3 \).

a) Find \( f(-6) \).

b) Find \( f\left(\frac{1}{2}\right) \).

c) Find \( g(l) \).

d) Find \( g(-5) \).
Evaluating Functions
Practice

For 1-6, evaluate given \( f(x) = 5x + 2 \) and \( g(x) = x^2 + 3 \).

1) \( f(8) \)  
2) \( g(-1) \)

3) \( f\left(\frac{3}{5}\right) \)  
4) \( g(3) \)

5) \( g(-4) \)  
6) \( f(-2) \)

For 7-12, evaluate each function.

7) Find \( y \) when \( x = 2 \) given \( y = 3x \).  
8) Find \( y \) when \( x = -1 \) given \( y = x^3 \).
9) Find $y$ when $x = 6$ given $y = -\frac{1}{2}x + 5$.

10) Find $y$ when $x = -2$ given $y = 5x^2 - 1$.

11) Find $y$ when $x = \frac{4}{y}$ given $y = \sqrt{x}$.

12) Find $y$ when $x = -4$ given $y = \frac{3}{2}x^2$.

For 13-14, circle the error. Then correctly evaluate the function.

13) Find $f\left(\frac{-1}{4}\right)$ given $f(x) = -2x + 2$.

- $f\left(\frac{-1}{4}\right) = -2\left(\frac{-1}{4}\right) + 2$
- $f\left(\frac{-1}{4}\right) = 2 + 2$
- $f\left(\frac{-1}{4}\right) = 4$

14) Find $g(3)$ given $g(x) = -x^2 + 5$.

- $g(3) = -3^2 + 5$
- $g(3) = 9 + 5$
- $g(3) = 14$

15) Select the option that does not belong given $f(x) = 4x^2$ and $g(x) = \frac{1}{2}x - 4$. Justify your choice.

a) $f(-2)$  

b) $g(40)$  

c) $f(2)$  

d) $g(16)$
Day 7

What is the slope of the line?

![Graph](image)

Day 7

Given the cone to the right, how much bigger would the volume of a cylinder need to be for it to be of equal height and equal diameter?

![Cone](image)

For which value of $x$ is the relation not a function?

$$\{1, 3\}, (5, 2), (8, 0), (x, 6)$$

A) 1  B) 6  C) 3  D) 2

Determine the domain and range of the function below:

<table>
<thead>
<tr>
<th>$x$</th>
<th>-4</th>
<th>-3</th>
<th>2</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>$y$</td>
<td>10</td>
<td>-1</td>
<td>6</td>
<td>10</td>
</tr>
</tbody>
</table>

In the graph to the right:

When $x = 3$, then $y = _____$

When $y = 2$, then $x = _____$

Write the slope intercept form of the graph below.

![Graph](image)

Find the slope between the following points:

$(-6, 6)$, and $(-6, -1)$

Write the equation of a line in slope intercept form that has a slope of $-\frac{2}{3}$ and has a $y$-intercept of 7.

Write the equation of the line in slope intercept form.

Find the volume of the sphere below:

![Sphere](image)

Given the function $y = -2x - 9$, what is the corresponding value $y$ when $x = -11$?

A tube is drilled out of a rectangular prism. How much of the prism is left?

![Prism](image)

Write the equation of a line in slope intercept form that contains the points $(1, -4)$ and $(-5, 2)$. 

© O. Stov, TeacherShop & © ROOM! Every Math Resources
### Wednesday

A tube is drilled out of a rectangular prism. How much of the prism is left?

Find the volume of the sphere below:

![Sphere Image]

3 m

Graph the function onto the graph to the right.

<table>
<thead>
<tr>
<th>x</th>
<th>-4</th>
<th>-2</th>
<th>0</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>y</td>
<td>-2</td>
<td>-1</td>
<td>0</td>
<td>1</td>
</tr>
</tbody>
</table>

Are you supposed to connect the dots?

Given the function \( f(x) = -2x - 9 \), what is the corresponding value when \( x = -11 \)?

If \( y = 4x - 1 \), determine the value of \( y \) when \( x = \frac{7}{2} \).

Circle a linear situation.

A) The area of a rectangle  
B) The Volume of a pool  
C) Buying songs at $1 each  
D) \( y = 2x^2 + 5x \)

Write the equation of a line in slope intercept form that has a slope of \(-\frac{7}{4}\) and contains \((-4, 5)\).

The function \( y = \frac{1}{4} x + \frac{5}{2} \) is transformed by shifting it to the right 8 units. What is the equation of the new function?

Identify the transformation that changes \( y = \frac{1}{6} x - 8 \) to the function \( y = \frac{5}{6} x - 8 \).

### Thursday

Area:

Perimeter:

What is the slope of the line?

Write the equation of a line in slope intercept form that contains the points \((1, -4)\) and \((-5, 2)\).

The function \( y = -2x \) is reflected across the \( x \)-axis. What is the equation of the new function?

Identify the transformation that shifts \( y = x - 10 \) to the function \( y = x + 5 \).
Converse of Pythagorean Theorem

Pythagorean Theorem Converse –

If the sum of the squares of the legs is equal to the square of the hypotenuse, then the triangle is a right triangle.

\[ a^2 + b^2 = c^2 \]

Example 1: Determine whether the following side lengths could form a right triangle.

a) 8, 6, 10
\[ 8^2 + 6^2 = 10^2 \]
\[ 64 + 36 = 100 \]
\[ 100 = 100 \]
Yes

b) 4, 5, 8
\[ 4^2 + 5^2 = 8^2 \]
\[ 16 + 25 = 64 \]
\[ 41 ≠ 64 \]
No

Try: Determine whether the following side lengths could form a right triangle.

a) 5, 4, 3
b) 5, 9, 11

c) 10, 13, 8
d) 12, 5, 13

e) 8, 17, 15
f) 2, 3, 4
Pythagorean Triples - whole number solutions to the Pythagorean Theorem

Common Examples -
3, 4, 5
5, 12, 13
8, 15, 17
7, 24, 25

Example 2: Use the Pythagorean Theorem to solve each problem.

A backyard fence is designed with side lengths 18, 24 and 30 feet. Show or explain whether the side lengths could form a right triangle.

\[18^2 + 24^2 = 30^2\]
\[324 + 576 = 900\]
\[900 = 900\]
Yes

Try: Use the Pythagorean Theorem to solve each problem.

a) A bookcase is shaped like a triangular prism. The triangular face has side lengths 4', 3' and 2'. Show or explain whether the side lengths could form a right triangle.

b) Three homes form a right triangle. Determine if the distances between the homes form a Pythagorean triple. Show or explain how you know.
Converse of Pythagorean Theorem
Practice

For 1-8, determine whether the following side lengths could form a right triangle.

1) 6, 9, 11

2) 14, 8, 12

3) 12, 20, 16

4) 25, 24, 7

5) 13, 14, 18

6) 10, 24, 26

7) 9, 10, 13

8) 9, 12, 15
For 9-10, use the Pythagorean Theorem to solve each problem.

9) A children's book has a diagonal of 10 inches. If the width of the book is 6 inches, are the measurements of diagonal, width, and length a Pythagorean triple? Show or explain how you know.

10) A modern painting is displayed in a triangular frame. The side lengths of the frame are 9\(^2\), 12\(^2\), and 14\(^2\). Is the frame in the shape of a right triangle? Show or explain how you know.

11) Select the set of numbers that does not belong. Justify your answer.
   a) 3, 4, 5   b) 5, 12, 13   c) 10, 15, 25   d) 8, 15, 17

12) Landon and Bryson both completed their math homework. Is either student correct? Explain any error(s).

<table>
<thead>
<tr>
<th>Landon</th>
<th>Could the side lengths 15, 9, 12 form a right triangle?</th>
</tr>
</thead>
<tbody>
<tr>
<td>(15^2 + 9^2 = 12^2)</td>
<td></td>
</tr>
<tr>
<td>(225 + 81 = 144)</td>
<td></td>
</tr>
<tr>
<td>(306 \neq 144)</td>
<td>No</td>
</tr>
</tbody>

<table>
<thead>
<tr>
<th>Bryson</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>(12^2 + 9^2 = 15^2)</td>
<td></td>
</tr>
<tr>
<td>(144 + 81 = 225)</td>
<td></td>
</tr>
<tr>
<td>(225 = 225)</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Name:  
Class:  

Directions: Write the equation of each line in slope-intercept form.

1. The slope of the line is 3. The y-intercept is (0, 4).

2. The slope of the line is -2. The y-intercept is (0, 0).

3. The slope of the line is \( \frac{1}{2} \). The y-intercept is (0, -2).

4. The slope of the line is -\( \frac{2}{3} \). The y-intercept is (0, -1).

5. The slope of the line is 0. The y-intercept is (0, 2).

Directions: Find the slope and y-intercept from the graph, table, or story below. Then write the equation of each line in slope-intercept form. If you have a hard time determining where the line intersects a point be sure to check at least three points:

6.  
   \[ m: \quad b: \quad \text{Equation:} \]

7.  
   \[ m: \quad b: \quad \text{Equation:} \]

8.  
   \[ m: \quad b: \quad \text{Equation:} \]

9.  
   \[ m: \quad b: \quad \text{Equation:} \]

10.  
    \[ m: \quad b: \quad \text{Equation:} \]

11.  
    \[ m: \quad b: \quad \text{Equation:} \]
The Pythagorean Theorem

Pythagorean Theorem -

If a triangle is right, then the sum of the squares of the legs is equal to the square of the hypotenuse.

\[ a^2 + b^2 = c^2 \]

Example 1: Solve for the missing side length of each right triangle. Round to the nearest tenth, if necessary.

a) \[ a^2 + b^2 = c^2 \]
   \[ 5^2 + 9^2 = c^2 \]
   \[ 25 + 81 = c^2 \]
   \[ 106 = c^2 \]
   \[ \sqrt{106} = c \]
   \[ 10.3 \text{ cm} \]

b) \[ a^2 + b^2 = c^2 \]
   \[ 6^2 + b^2 = 10^2 \]
   \[ 36 + b^2 = 100 \]
   \[ -36 + b^2 = 100 \]
   \[ b^2 = 64 \]
   \[ b = 8 \]
   \[ 8 \text{ mm} \]

Try: Solve for the missing side length(s) of each right triangle. Round to the nearest tenth, if necessary.

a)

b)
Example 2: Draw a diagram, write an equation, solve, and answer the question.

A ladder leaning against a building is positioned 5 feet away from the base of the building and reaches 12 feet up the side. Determine the length of the ladder.

\[
\begin{align*}
\text{a}^2 + b^2 &= c^2 \\
5^2 + 12^2 &= c^2 \\
25 + 144 &= c^2 \\
169 &= c^2 \\
\sqrt{169} &= \sqrt{c^2} \\
13 &= c
\end{align*}
\]

The ladder is 13 feet long.

Try: Draw a diagram, write an equation, solve, and answer the question.

a) Car A travels 30 miles per hour heading due west. Car B begins at the same location and departs at the same time traveling 40 miles per hour due south. Determine how far apart the cars will be after one hour.

b) Televisions are sized by the length of their diagonal. If Gary has a 2-foot by 3-foot space to fit a new TV, can he buy one that is 50 inches?
The Pythagorean Theorem Practice

For 1-6, solve for the missing side length(s) of each right triangle. Round to the nearest tenth, if necessary.

1)    2)    3)    4)    5)    6)
For 7-9, draw a diagram, write an equation, solve, and answer the question.

7) A 20-foot upright utility pole has a support wire stemming from the top of the pole to a secure position on the ground located 15 feet away from the base of the pole. How long is the support wire?

8) Train A travels 18 miles per hour heading due east. Train B begins at the same station and departs at the same time traveling 24 miles per hour due north. Determine how far apart the trains will be after two hours.

9) Sarah lives 5 miles southwest of her school. To bicycle home she takes Main Street 2.5 miles due south then she turns west onto Pond Street and continues riding. About how many miles does she travel on Pond Street before she reaches her home?

10) Circle the error. Correctly solve for the missing side length to the nearest tenth.

\[ c^2 + 12^2 = c^2 \]
\[ 36 + 144 = c^2 \]
\[ 180 = c^2 \]
\[ \sqrt{180} = \sqrt{c^2} \]
\[ 13.4 \text{ cm} = c \]
Directions: For each problem, circle the representation with the greatest rate of change. Put a star by the representation with the greatest y-intercept. Assume all representations have a constant rate of change.

8. \( y = 2 + 3.5x \)

Name: 
5.3b Homework: Comparing Linear Functions

1. Who will have $1,000 first, Becky or Olga?

Becky has $100 and is saving $10 every week. Olga's information is shown on the graph below.

2. Assume the rates below will remain constant. Who will win the pie eating contest? Why?

Joe, whose information is shown below.

Dennis, who has eaten 11 pies in 2.5 minutes.

Money (dollars) vs. Time (weeks)

Pie consumption vs. Time (minutes)
Solving Equations Involving Distributive Property

Recall: Simplify each expression.

a) $3(4x - 1)$  

b) $\frac{1}{2}(6 + 10x)$  

c) $(-5x + 8)^3$

d) $5x + 7x - x$  

e) $2x - 6x$  

f) $-4(2x + 9) + 3x$

Steps for Solving an Equation Involving Distributive Property and Combining Like Terms:

1) Distribute (if possible).

2) Combine like terms (if possible).

3) Continue to solve.

Example 1: Solve each equation. Show your work.

a) $5(2x + 4) = 30$

$10x + 20 = 30$

$-20 - 20$

$10x = 10$

$10 \quad 10$

$x = 1$

d) $\frac{2}{3}(3x - 12) - 5x = -20$

$2x - 8 - 5x = -20$

$-3x - 8 = -20$

$+8 \quad +8$

$-3x = -12$

$-3 \quad -3$

$x = 4$

c) $3x - 9x = 42$

$6x = 42$

$-6 \quad -6$

$x = -7$

d) $4(x + 1) - (5x - 2) = 3$

$4x + 4 - 5x + 2 = 3$

$-x + 6 = 3$

$-6 \quad -6$

$x = -3$

$-1 \quad -1$

$x = 3$

© Free to Discover (Amanda Nix) – 2016
Try: Solve each equation. Show your work.

a) \[-3(x+1) = 27\]  
b) \[5x - x = -52\]

c) \[\frac{3}{2}(2x + 6) - 9x = 15\]  
d) \[-2(x - 3) - (x + 8) = -2\]

Example 2: Use the Five-Step Method to solve each word problem. 
Deborah finds some beautiful frames at a craft store. They are each marked $3 off. She buys 5 of them and spends $22.45. 
Determine the original price of a frame, assuming they each cost the same amount.

\[x = \text{original price of a frame}\]  
\[5(x - 3) = 22.45\]  
\[x = 7.49\]  
Each frame was originally $7.49.  
\[5(7.49 - 3) = 22.45\]  
\[22.45 = 22.45\]  

Try: John and his mom are assembling "goodie bags" for his 8 friends to take home after his birthday party. They fill each bag with the same amount of candy. 
Based on the amount of leftover candy, they add an extra two pieces into each bag. If there are a total of 104 pieces used, how many pieces of candy were originally placed in each bag?
Solving Equations Involving Distributive Property

Practice

For 1-9, solve each equation. Show your work.

1) \(-5(e + 2) = -20\)  
2) \(3(2a - 5) = 48\)  
3) \(\frac{2}{3}j - \frac{1}{6}j = -4\)

4) \(12 = -4b - 2b\)  
5) \(-(-3f + 1) + 5 = -32\)  
6) \(-5(-2c - 1) - c = 23\)

7) \(\frac{2}{3}(9d - 3) - 2d - 1 = 1\)  
8) \(2(4h - 5) + 6(-h + 2) = 2\)  
9) \(3(3g + 8) - (4g + 2) = 37\)
10) Louise has already purchased new books for each her three children. After she buys them each one more, she has purchased a total of 15 books. Use the 5-Step Method to determine how many books she originally bought for each child, assuming they were each given the same number of books.

11) Select the expression that does not belong.
   a. \( \frac{4}{5}(5x-10) \)
   b. \( 4x - 5 - 3 \)
   c. \(-2(-2x+1)-6\)
   d. \(2(2x-3)-14\)

12) Select the equation that does not belong.
   a. \(2(4x-1)=6\)
   b. \(3x-7x=4\)
   c. \(\frac{2}{3}(3x+3)=4\)
   d. \(x-2x=-1\)

13) Identify the error. Then solve the equation correctly.

   \[-\frac{2}{3}(3x-6)=8\]
   \[-2x-4=8\]
   \[+4 +4\]
   \[-2x=12\]
   \[-2 -2\]
   \[x=-6\]

Introduction to Scientific Notation

Scientific Notation - notation used to represent numbers that are really large or really small

Form: \( a \times 10^b \), where \( 1 \leq a < 10 \) and \( b \) is an integer.

Example 1: Convert between scientific notation and standard form.

a) \( 3.5 \times 10^7 \)  
   \( 35,000,000 \)  
   (Move the decimal 7 places to the right)

b) \( 7 \times 10^{-4} \)  
   \( 0.0007 \)  
   (Move the decimal 4 places to the left)

c) \( 0.0086 \)  
   \( 8.6 \times 10^{-3} \)

d) \( 1,050,000 \)  
   \( 1.05 \times 10^6 \)

Try: Convert between scientific notation and standard form.

a) \( 4.04 \times 10^{-2} \)  

b) \( 5 \times 10^4 \)  

c) 250,000  

d) 0.000071
Example 2: Consider the data then complete the tasks.

The population of Texas is approximately 30,000,000 people, and the population of Delaware is approximately 1,000,000 people.

a) Represent the population of Texas as a number written in scientific notation.
   \[ 3 \times 10^7 \]

b) Represent the population of Delaware as a number written in scientific notation.
   \[ 1 \times 10^6 \]

c) Determine how many times greater the population of Texas is compared to the population of Delaware. Show or explain your answer.

   The population of Texas is about 30 times greater than the population of Delaware.
   \( 3 \) is \( 3 \) times greater than \( 1 \). \( 10^7 \) is \( 10 \) times greater than \( 10^6 \). \( 3 \times 10 = 30 \)

Try: Consider the data then complete the tasks.

Venus is approximately 40,000,000 km from Earth, and Neptune is approximately 4,000,000,000 km from Earth.

a) Represent the distance between Earth and Venus as a number written in scientific notation.

b) Represent the distance between Earth and Neptune as a number written in scientific notation.

c) Determine how many times greater the distance between Earth and Neptune is compared to the distance between Earth and Venus. Show or explain your answer.
Introduction to Scientific Notation
Practice

For 1-9, convert between scientific notation and standard form.

1) \(5 \times 10^3\)  
2) 14,000  
3) 0.006

4) \(7.2 \times 10^{-2}\)  
5) 105,000  
6) \(8 \times 10^{-6}\)

7) 0.000404  
8) \(4.33 \times 10^2\)  
9) 920,000,000

For 10-12, consider the data then complete the tasks.

10) A zebra can reach a top speed of about 40 mph, and a sloth travels at a speed of about 0.2 mph. Write each number in scientific notation. Then determine how many times faster the zebra is. Show or explain.
11) Evelyn started an online business. The profit in year one was $300. Her profit last year was $90,000. Write each number in scientific notation. Then determine how many times greater last year’s profit was compared to her first year. Show or explain.

12) An architect builds a model of a new skyscraper. The height of the model is 0.4 m, and the height of the actual building will be 200 m. Write each number in scientific notation. Then determine how many times greater the height of the actual building will be compared to the model.

For 13-14, order from least to greatest.

13) 7 \times 10^3, 3 \times 10^{-3}, 7 \times 10^{-2}, 3 \times 10^7

14) 5 \times 10^{-5}, 5 \times 10^3, -5 \times 10^{-5}, -5 \times 10^5

15) Match each scenario with the appropriate value.

____ a) number of students in a school (#) I) \ 8 \times 10^{-1}

____ b) cost of college ($) II) \ 6 \times 10^2

____ c) value of coins found in a couch ($) III) \ 1 \times 10^4

____ d) population of a town (#) IV) \ 2 \times 10^5
